

**CWDS**  
Child Welfare Digital Services

---

# **Child Welfare Services – New System (CWS-NS)**

## **System Roadmap – Information Architecture**

---

*March 2016*

# Presentation Goals

- Describes and supports a project-wide Information Architecture Roadmap including structured and unstructured data preparation, modeling and provisioning strategy
- Presentation Goals:
  - Initiate discussion about data readiness, modeling and module support
  - Improve vision and engagement of project, program and agency stakeholders
  - Help align the team and establish an understanding of the organization's strategic intent
  - Align execution with strategy

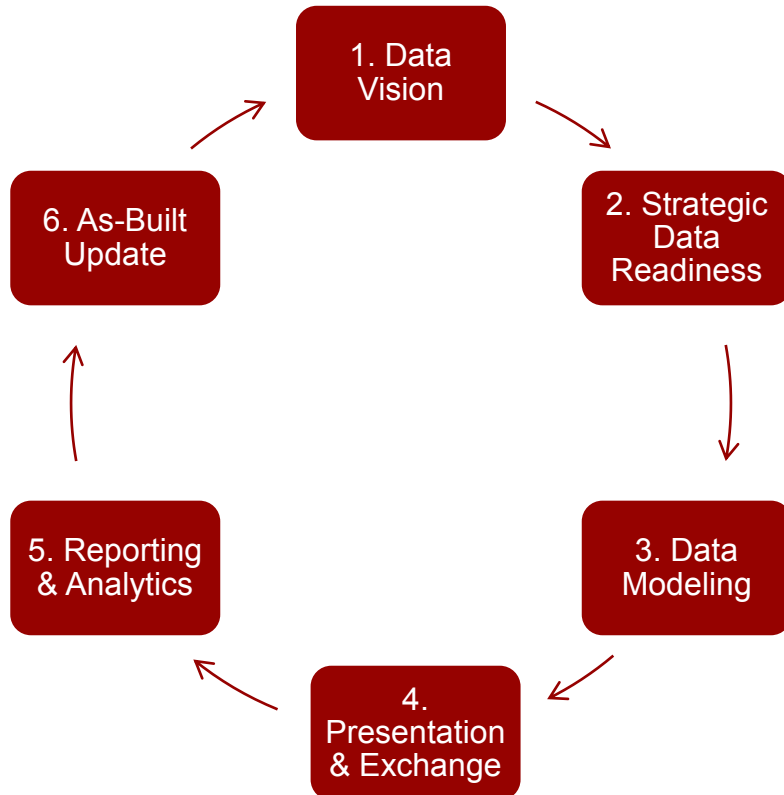

---

# Information Architecture Definition

The fundamental organization of the data and information (structured, semi-structured and unstructured) that support an enterprise's business processes and enabling application systems

Note: For CWDS, the definition of Information Architecture is aligned with the term used in the California Enterprise Architecture Framework

# Information Architecture Approach

1. Data Vision
  - Requirements, Program Needs, Roadmap
2. Strategic Data Readiness
3. Data Modeling
  - Data Dictionary, Conceptual & Logical Data Model
  - Model Standard, Data Abstraction Layer
4. Presentation & Exchange
  - Website Information Architecture<sup>1</sup>
  - Data Exchange Formats
5. Reporting & Analytics
  - Data Warehouse, Business Intelligence
  - Business Analytics,
6. As-Built Update
  - Update and Refine Models

# 1. Data Vision

## ■ Requirements

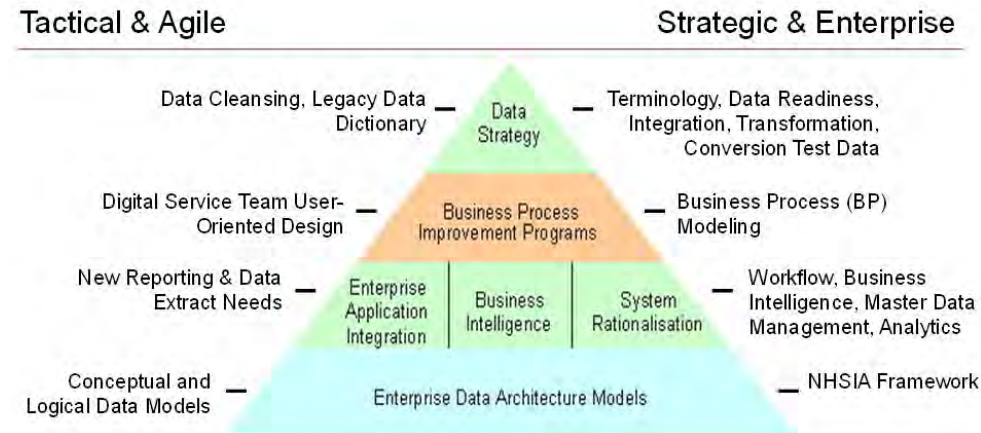

- Monolithic RFP
- Net New Capabilities
  - Data Visualization
  - Children's Residential - Data Warehouse, BI and Data Analytics - Decision Support System

## ■ Program Needs

- Data Extensions
  - Capture Data Currently Outside of CWS/CMS
- Test Data Creation Process
  - Test Plan in Progress (Implementation Team)

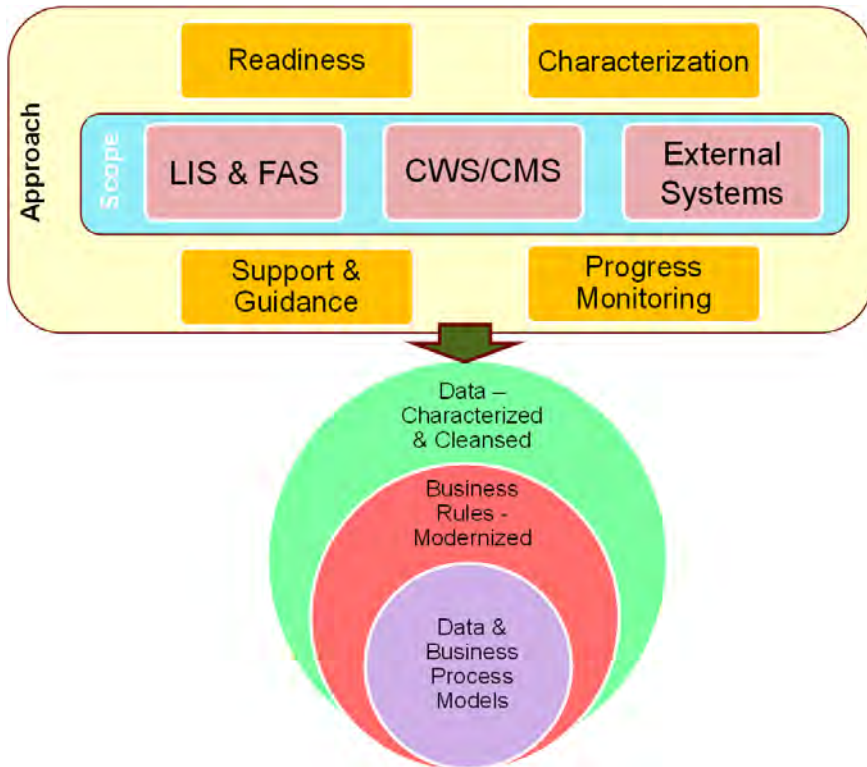

## ■ Roadmap

- Define Compelling Business Imperatives:
  - Future State Vision
  - Quantify and Measure Benefits and the Return on Investment (ROI)
- Information Architecture Framework
- Module Support Approach
- Integrating External Systems Data

**Module-Focused  
Project-Specific  
Enterprise-Aligned**

## 2. Strategic Data Readiness

- Readiness – Module Focused
  - Legacy Data Identification
  - Data Issue Identification
- Characterization
  - Data Audit
  - Data Cleansing and Mitigation
  - Data Owner Single-Point-of-Contact
  - CCWIS-Alignment
- Support & Guidance
  - Cleansing Communication, Instructions and Infrastructure
  - Outline Long-Term County Involvement
- Progress Monitoring
  - Monitor Cleansing Progress
  - Cleansing Metrics

CWS-NS Source Name	Info Area	Subject Area / Entity Name	Source Table / Physical Entity Name	Logical Column Name	Physical Column Name	Description	Item Domain
Intake	INTAKE INFO MANAGEMENT	REFERRAL	REFERRAL_F	ADDITIONAL_INFO_REQ_ID	MRM_INT_ID	Indicates the additional obtained information, decisions the diagnosis. The attribute is part of the DR Protocol.	
Intake	INTAKE INFO MANAGEMENT	REFERRAL	REFERRAL_F	APPROVAL_APPROVAL_F	APPROVAL_NO	Indicates whether the REFERRAL request is under approval. If yes, the APPROVAL is a number. It is created by the REFERRAL user generating a request for approval for the patient. If no, the corresponding referral's Approval Code attribute value from the REFERRAL entity type should be set to 0.	
Intake	INTAKE INFO MANAGEMENT	REFERRAL	REFERRAL_F	APPLICATION_FOR_APPROVAL_NO	APPROVAL_NO	A person who requests a request for approval for the patient. The number will be stored in the table (depending on the entity as a state relevant to the APPROVAL_APPROVAL entity. For example, when a particular medical request was submitted for approval the first time, an instance of APPLICATION_APPROVAL will be created with the Approval Number of 1001. The number will also be stored in the REFERRAL entity for the given request. When the request disappears this request plan to further work required, the social worker may re-submit this request after modification. At that time another occurrence of APPLICATION_APPROVAL will be generated with the same number 1001. Based on the request taking the approval, the request may need to be re-submitted and new instances created with the same number 1001 for the same request with the approval request (e.g. Medical Approval, Request Modification, Request, etc.). This status type can be set by either the social worker or the supervisor depending on the stage of approval process of the request. It is the scenario where the social worker submits the request for approval. The Approval Status Type will be changed to "Under approval from Request Not Submitted", after the social worker submits the request for approval. If the supervisor disapproves the request due to further work required, the Approval Status Type will then be changed to "Modification required". The social worker may	
Intake	INTAKE INFO MANAGEMENT	REFERRAL	REFERRAL_F	APPROVAL_APPROVAL_F	APPROVAL_NO	Indicates whether the REFERRAL request is under approval. If yes, the APPROVAL is a number. It is created by the REFERRAL user generating a request for approval for the patient. If no, the corresponding referral's Approval Code attribute value from the REFERRAL entity type should be set to 0.	
Intake	INTAKE INFO MANAGEMENT	REFERRAL	REFERRAL_F	APPROVAL_APPROVAL_F	APPROVAL_NO	Indicates whether the REFERRAL request is under approval. If yes, the APPROVAL is a number. It is created by the REFERRAL user generating a request for approval for the patient. If no, the corresponding referral's Approval Code attribute value from the REFERRAL entity type should be set to 0.	

Data Dictionary – Legacy Intake

### 3. Data Modeling

#### Definition

*Data modeling is the first step in database design progressing from conceptual model (e.g., how data items relate to each other) to logical model to physical schema*

- People

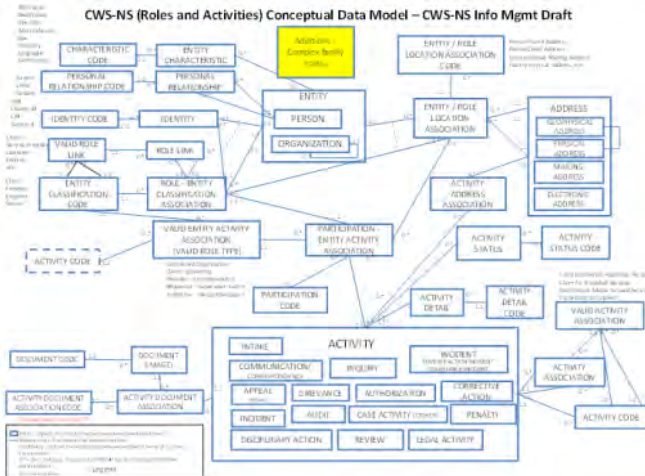

- Data Management Team. Coordination with Solution Architect

- Data Dictionary

- Legacy Data Identification - Module-by-Module
- All CWS-NS Data Sources
- Metadata and Mapping to Reports, Forms, etc.

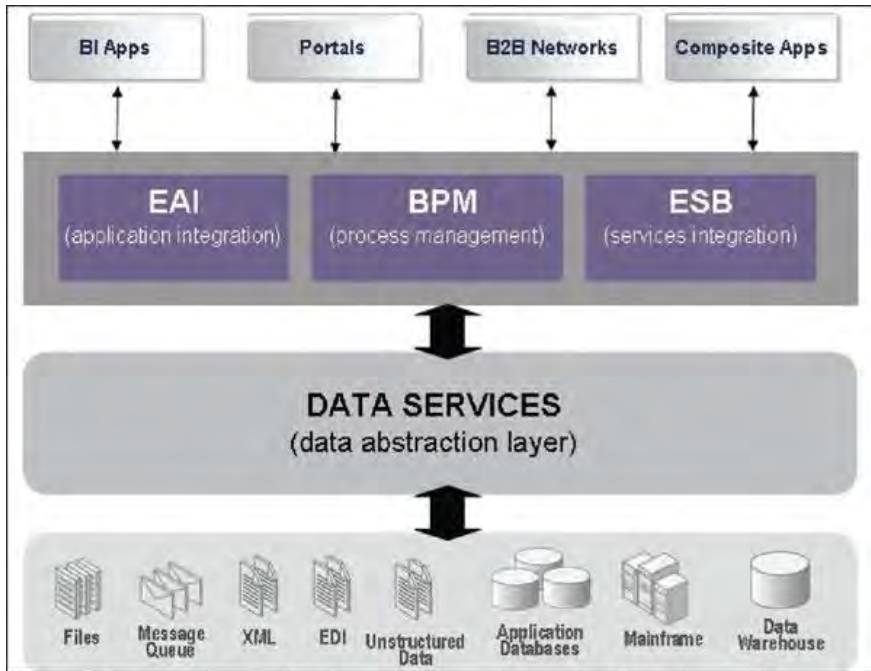

- Conceptual & Logical Data Model

- Derived from Business Process models
- Aligned with Agency to Support Interoperability

CWS-NS Conceptual Data Model

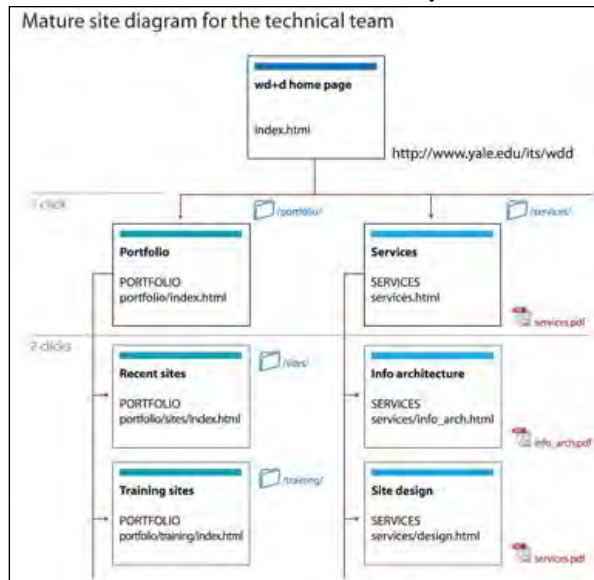

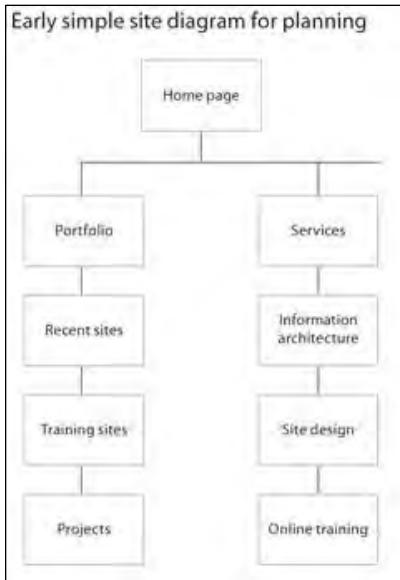

### 3. Data Modeling (cont.)

Data Abstraction Layer

- Model Standard
  - Proposing National Information Exchange Model (NIEM) – Assessment in Progress
- Data Abstraction Layer
  - APIs unify the communication between the CWS-NS application and Legacy DB2 databases
  - Separates Code from Data
  - Reduces the amount of rework by providing the developer a consistent API that hides database specifics

Example Site Diagram – Simple and Mature

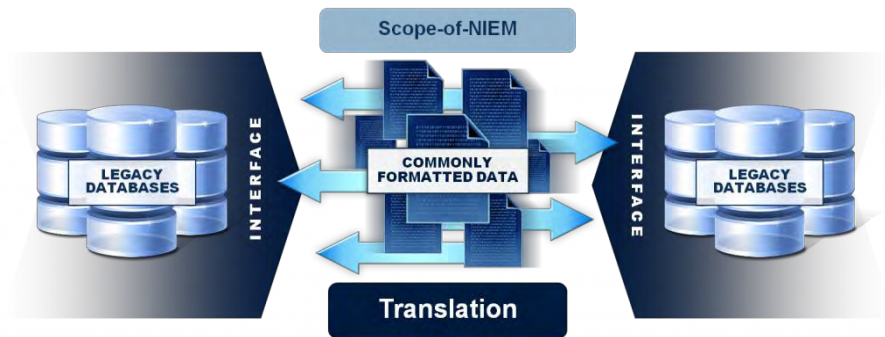

## 4. Presentation & Exchange

### Website Information Architecture<sup>1</sup>

- Definition
  - Site Content & Functionality
- Product:
  - CWS-NS User Interface “Organization Chart”
  - User-Centered Relationships and Hierarchy
  - Common Business Terms (Taxonomy)
  - Ability to Generate “Related Link” Lists

### Data Exchange Formats

- NIEM Information Exchange Package Documentation (IEPD)
- HL7, HIPAA EDI transaction, Pharmacy Claim
- Robust Data Stewardship and Governance

<sup>1</sup> Source: <https://www.nngroup.com/articles/ia-vs-navigation/>

Data Warehouse Population and Usage

## 5. Reporting & Analytics

- Data Warehouse
  - Cornerstone of Reporting & Extract
    - Incorporate New Fields
- Business Intelligence
  - Creates operational efficiency through access to real time data (e.g., Dashboards)

Dashboard Example

- Business Analytics

- Exploration of historical data from many source systems through statistical analysis, predictive modelling, etc.
- A Program View

## 6. As-Built Update

- Update and Refine Models via User Stories and Implemented Products

## Example - Reporting

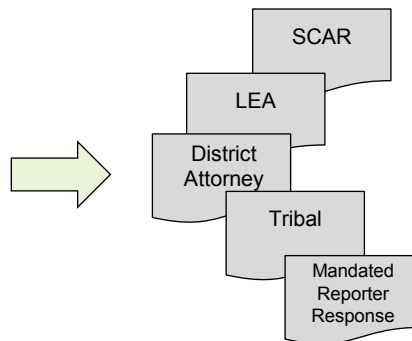

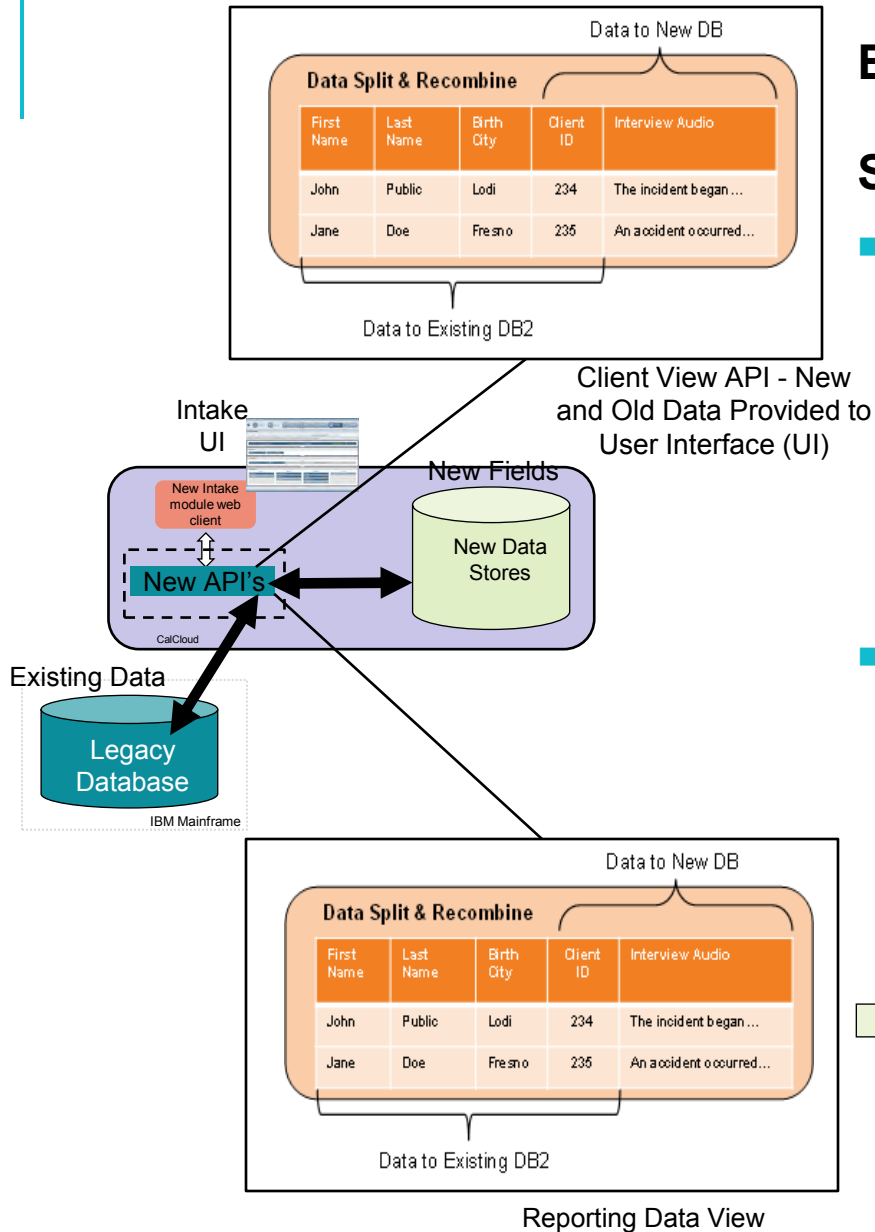

### Serving Data Stored in Two Databases

- User Interface Data

- Legacy API Pulls Legacy Data Fields
- New Data Store API Pulls New Data Fields Per Legacy Identifier
- Data Transformed and Consolidated “View” Used by Developers

- Reporting Data

- Data Warehouse Populated via Consolidated “View” Above

## Example – Business Analytics

### Child Welfare Referral Data Cube

- Multidimensional
  - Time, County and Referral Event Dimensions
- Fast
  - Summarized data provides quick results
- Intuitive
  - Clean, structured views that anyone can understand
- Supports Analysis
  - Longitudinal (Time) Study of Referral Processing By County
  - Decision Support – What if Questions
    - If I have two staff going out on leave in November, can I still process the average number of Referrals received?

---
